Drawings

The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on November 19, 2001 have been approved by the Examiner. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

Specification

The disclosure is objected to because of the following informalities: page 7, line 2, "Fig. 7" should be amended to -- Fig. 7(a) --.

Appropriate correction is required.

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

I. Claims **1-6** are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for electroforming a *metal* onto the wire, does not

Art Unit: 1753

reasonably provide enablement for electroforming a *conductive polymer* (e.g., polypyrrole) onto the wire. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

Claim 1, line 3, as presently claimed, recites "electroforming on a wire". This claim limitation encompasses electroforming any material. However, Applicants' specification discloses that metals are electroformed onto the wire (page 5, line 20 to page 6, line 20).

Thus, the claims are not commensurate in scope with the specification.

II. Claims **1-6** are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1

line 9, the rod comprises the wire (from claim 1, lines 4). If the wire is drawn out, it is unclear how the rod is machined. It appears that it is just the electroformed material that is machined.

Claim 4

line 2, the word "type" is indefinite.

Art Unit: 1753

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims **1-6** are rejected under 35 U.S.C. 103(a) as being unpatentable over **Ikeda et al.** (US Patent No. 4,290,857).

lkeda teaches a method of manufacturing a part for an optical fiber connector, the method comprising the steps of:

- (a) electroforming on a wire 1 used as a mother mold with the wire stretched (col.
- 2, lines 36-39) to make the wire into a rod 3; and
 - (b) machining 5 (= grinding tool) the rod to adjust the diameter of the rod (= col.
- 2, lines 53-59; and Fig. 3)

One wire is used (col. 2, lines 30-35; and Fig. 1).

The wire is made from metal (= copper) [col. 2, lines 30-35].

Ikeda does not teach forming grooves on the rod at intervals to form grove portions; breaking the groove portions; drawing the wire; wherein a plurality of wires are used; for a multi-core type using cross-sections of the wire other than a circular cross-section; and wherein the wire is made from plastic.

Art Unit: 1753

However, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made because one skilled in the art would have been motivated to have modified the method of Ikeda with forming grooves on the rod at intervals to form grove portions; and breaking the groove portions because this would have been doing the same endeavor as Ikeda, who is slicing the electroformed rod by means of a cutting blade **6** (col. 2, lines 60-62; and Fig. 4). The substitution of one known equivalent technique for another may be obvious even if the prior art does not expressly suggest the substitution. *Ex parte Novak* 16 USPQ 2d 2041 (BPAI 1989); *In re Leshin* 125 USPQ 416; *Lyon v. Bausch & Lomb* 106 USPQ 1; *Graver Tank & Manufacturing Co. V. Linde Air Products Co.* 85 USPQ 328 (Supr. Ct.). MPEP § 2144.07.

Furthermore, forming a groove portion and breaking it does not appear to have been invented by the Applicants, unless proven otherwise.

As to drawing the wire, this would have been doing the same endeavor as Ikeda, who is dissolving and removing the core wire 1 (col. 3, lines 3-12). The substitution of one known equivalent technique for another may be obvious even if the prior art does not expressly suggest the substitution. *Ex parte Novak* 16 USPQ 2d 2041 (BPAI 1989); *In re Leshin* 125 USPQ 416; *Lyon v. Bausch & Lomb* 106 USPQ 1; *Graver Tank & Manufacturing Co. V. Linde Air Products Co.* 85 USPQ 328 (Supr. Ct.). MPEP § 2144.07.

Art Unit: 1753

Furthermore, drawing a wire does not appear to have been invented by the Applicants, unless proven otherwise.

As to wherein a plurality of wires are used, it is well within the skill of one having ordinary skill in the art to make the jig big enough to electroform more than one wire.

Furthermore, the duplication of parts was held to have been obvious. *In re Harza* 124 USPQ 378 and MPEP § 2144.04(f).

As for a multi-core type using cross-sections of the wire other than a circular cross-section, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

The claim limitation of "using cross-sections of the wire other than a circular cross-section" does not further limit the method steps of claim 1 and is not a method step itself which would make a manipulative difference in the method of manufacturing the part for the optical fiber connector.

Furthermore, this is well within the ordinary skill of the artisan to have used

Art Unit: 1753

cross-sections of the wire other than a circular cross-section dependent upon the intended use of the device, particularly to the environment to which the device will encounter (such as a medical device or a circuit device), which would be most suited for the application of the device, absent evidence to the contrary.

As to wherein the wire is made from plastic, this is well within the ordinary skill of the artisan dependent upon the intended use of the device, particularly to the environment to which the device will encounter (such as a medical device or a circuit device), which would be most suited for the application of the device, absent evidence to the contrary.

Furthermore, Ikeda teaches that various materials can be used as the material of the wire (col. 2, lines 30-35).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edna Wong whose telephone number is (703) 308-3818. The examiner can normally be reached on Mon-Fri 7:30 am to 5:00 pm, alt. Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam Nguyen can be reached on (703) 308-3322. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or
